

**Claims**

1. A print material having a support, at least one red-sensitive silver halide emulsion layer containing at least one cyan coupler, at least one green-sensitive silver halide emulsion layer containing at least one magenta coupler and at least one blue-sensitive silver halide emulsion layer containing at least one yellow coupler, characterised in that the red-sensitive layer contains at least one oil former, the cyan coupler is of the formula

10

in which

15  $R^1$  means a hydrogen atom or an alkyl group, $R^2$  means an alkyl, aryl or hetaryl group,20  $R^3$  means an alkyl or aryl group, $R^4$  means an alkyl, alkenyl, alkoxy, aryloxy, acyloxy, acylamino, sulfonyloxy, sulfamoylamino, sulfonamido, ureido, hydroxycarbonyl, hydroxycarbonylamino, carbamoyl, alkylthio, arylthio, alkylamino or arylamino group or a hydrogen atom and

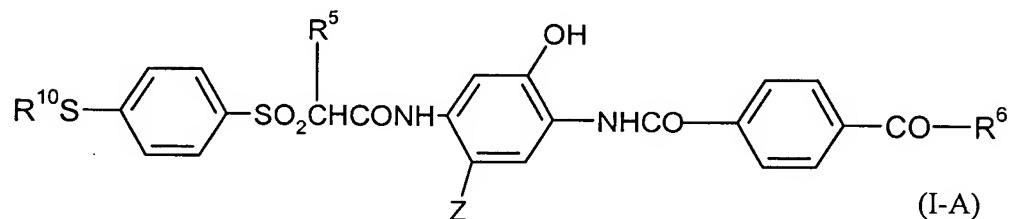

25

 $Z$  means a hydrogen atom or a group eliminable under the conditions of chromogenic development,

and the ratio by weight of oil former to cyan coupler is less than 1:1.

5            2. A print material according to claim 1, characterised in that it is a colour negative material.

10            3. A print material according to one of claims 1 or 2, characterised in that the cyan coupler is of the formula

in which

15            R<sup>5</sup> means a hydrogen atom or an alkyl group,

20            R<sup>6</sup> means OR<sup>7</sup> or NR<sup>8</sup>R<sup>9</sup>,

R<sup>7</sup> means an unsubstituted or substituted alkyl group with 1 to 6 C atoms,

25            R<sup>8</sup> means an unsubstituted or substituted alkyl group with 1 to 6 C atoms,

R<sup>9</sup> means a hydrogen atom or an unsubstituted or substituted alkyl group with 1 to 6 C atoms,

R<sup>10</sup> means an unsubstituted or substituted alkyl group and

Z means a hydrogen atom or a group eliminable under the conditions of chromogenic development,

wherein the total number of the C atoms of the alkyl groups R<sup>7</sup> to R<sup>10</sup> in a coupler molecule is 8 to 18.

- 5        4. A print material according to any one of claims 1 to 3, characterised in that the oil former comprises a high-boiling organic solvent and/or a polymer.
- 10       5. A print material according to one of claims 1 to 4, characterised in that the ratio by weight of oil former : cyan coupler is at least 0.05:1.
6. A print material according to any one of claims 1 to 5, characterised in that the oil former is a high-boiling organic solvent.
- 15       7. A print material according to one of claims 4 to 5, characterised in that the polymer comprises a homo- or copolymer, which is insoluble in water and soluble in organic solvents.
- 20       8. A print material according to any one of claims 1 to 7, characterised in that the silver halide crystals of the red-sensitive layer have a chloride content of at least 95 mol%.
- 25       9. A process for the production of a positive reflection print from a colour negative, wherein the image information is exposed onto a print material and the material is subsequently processed in a manner appropriate to its type, which process is characterised in that the above-described print material according to one of claims 1 to 8 is used.
10. A process according to claim 9, characterised in that the colour negative is digitised and exposure is performed with a scanning printer.

11. A process according to claim 9, characterised in that the exposure is performed with an analogue printer.
